teenage engineering electronic music school (#ems) release a website dedicated to learning and community inspiration.

#ems is a part of teenage engineering's initiative to nurture a love of electronic music through the use of synthesizers in every community, inspiring people of all ages to compose, produce, and perform this music. we feel it should be easier to start electronic music making and want to offer everyone the opportunity to express oneself through music, and to find people to share this experience with.

this program was first announced in 2016 and has rapidly evolved ever since. we host and support workshops and events all across the planet, most of which are open and free for anyone to join. we also provide and share online content: inspirational videos, guides, tutorials and more.

through working directly with end users, resellers, distributors, and public/private institutions for learning we can deliver a direct, hands-on product experience, and interact with users on a very personal level. formats are adaptable from 1-on-1 sessions, to larger events with any number of participants. we host these events with the help of internal staff and support a growing global network of external partners and mentors. we want to put local support and passion to best use.

our online tools for learning is communicated through the main website via <https://teenage.engineering/ems> and through our various social media channels. users can get inspired, sign up for a local workshop or contact us to host workshops themselves. we encourage, promote and share user generated content, stimulating community growth.
