surprisingly small news.

OP-Z the new multimedia synthesizer and sequencer is finally arriving.

OP-Z it's the first stand-alone 16 track sequencer that allows synchronised live composition of music, visuals, lights. the OP-Z is one of a kind.

born to be portable, just at 212.5 mm width, 57.5 mm height and 10 mm thin, it weighs in at just 200g. with the absence of a screen, we introduce the concept of 'bring your own display' - use your iphone, ipad or computer, because the OP-Z is built for people on the move that already carry a great display in their pocket.

packed with multiple synthesizer engines, beats, samples, effects, visuals and preset patterns, the OP-Z has the ability to control up to 16 lights through dmx, it has a unity 3d® integration to let you interact with your own 3d worlds, as well a built in photomatic feature which allows you to instantly sequence images taken with your smartphone camera.

more... the OP-Z has an expansion slot for modules that will add a range of hardware upgrades, each with its own unique functionality. the first module will be launched later this year.

complete the OP-Z universe with a range of teenage engineering accessories like the bespoke design leather case.

OP-Z, ready to be used anytime, anywhere, straight out of your pocket.

specifications.

- 16-track multi-speed sequencer
- 16 individual and independent synthesis, sampler and control tracks
- 160 user programmable patterns
- interchangeable modular effects
