to all of you that bought a 3D printer but don't know what to print, teenage engineering gives you IKEA frekvens hacks.

frekvens is a limited collection with modular lights and speakers designed by teenage engineering for IKEA. along with the collection, teenage engineering have designed their own add-ons and published the 3D CAD files that can be downloaded for free at their website and used for 3D printing.

the frekvens collection consists of LED spotlights that reacts to sound and portable speakers and tripod stands that you can attach the speakers and lights to in order to build your own unique setup. all fully compatible with all teenage engineering's synthesizers.

the collection will only be available at selected IKEA stores. not being able to sell the collection, teenage engineering decided to create their own add-ons to make the collection even more modular and playful. after spending weeks drawing and making 3D prints teenage engineering is now offering free CAD files for download at their website.
