enter bentgablenit's and
teenage engineering's
exhibition in new york.

**the canadian design collective joins
forces with the swedish consumer
electronics brand for an immersive, five-
day installation in new york,
showcasing the reimaged OD-11
speaker—alongside a series of new
editions, including the teenage
engineering choir, OB-4 mesh bags,
hand-beaded band shirts, and lab coats.**

between june 27–29, bentgablenits,
teenage engineering & shopify open their
doors to a one-of-a-kind exhibition in the
heart of greene street, new york.

brenda bent, karen gable, and angelo
nitsopoulos [bent-gable-nits]—the trio
behind the brand bentgablenits—are
known for their sustainable take on design,
born from a shared obsession with
antiques. now, they turn their attention to
teenage engineering's world through a
series of handcrafted works that merge
technology, storytelling, and nostalgia.

ten one-of-a-kind dollhouses will be on
display and available for sale. each is an
original metal dollhouse from the 1930s—
restructured, collected, and handcrafted by
bgn years ago. with rooftops that lift to
reveal music playing from within, these
miniature homes invite guests to peer
inside through a see-through fourth wall
and an interactive magnifying glass,
revealing the fine details of the speaker and
interior design.

"the moment we saw the speaker, it just
made sense. the dollhouse wasn't a
random choice; it felt like a natural home
for the speaker. it mirrored what the OD-11
stands for: domestic, design-forward,
nostalgic but modern.." — angelo
nitsopoulos.

all the pieces will be available for purchase
at the event in new york and on
bentgablenits website, first come first
serve.

about teenage engineering

teenage engineering is developing the
alternative future of consumer electronics
—each invention driven by need and made
to last.

since 2007, teenage engineering has
dispatched a series of products that earned
their spot as studio essentials for the
acclaimed artists, producers, and
instrumentalists we all know and admire.

from OP-1 field to pocket operators®,
OP-XY to OD-11, they have applied their
signature mindset to building a new legacy
of technology that continues to shape the
industry as we know it.

their hq is located in stockholm, sweden,
where a multidisciplinary team of software,
electrical, and mechanical engineers and
industrial designers are developing their
products from start to finish. the studio is a
fully equipped workshop with state-of-the-
art rapid prototyping machines.
