introducing field system™,  
now in black.

**first sightings were offered at  
this year's superbooth, and  
today teenage engineering  
launches the field system™,  
in black.**

the TX-6 field mixer, TP-7 field recorder  
and CM-15 field microphone is now  
available to purchase in the new colorway,  
matte black. a perfect complement for  
those looking to better match their OP-XY.

in addition there's been a major firmware  
update to TX-6 and a handful of solid  
improvements to TP-7. the two now work  
even better together, and each comes with  
a set of new, impressive features.

**TX-6:** double the tracks with two TX-6's  
over usb-c with link mode, user  
configurable patterns which expand the  
drum machine, synth and midi, an  
extended gain range, pattern chaining for  
fully fledged performances, full midi cc  
remapping and a portamento setting.

**TP-7:** record and mix back and forth  
between TX-6 and TP-7, expanded audio  
file support with mp3 now joining wav and  
flac files as supported file types

the field system™ is teenage engineering's  
five-unit sound and recording system that's  
just as powerful as it is portable. the lineup  
includes the pro-mixer and audio interface  
TX-6, large-diaphragm mic CM-15, digital  
tape recorder TP-7, portable synthesizer  
OP-1 field, and the sequencer OP-XY.

you can visit [teenage.engineering](http://teenage.engineering) to  
explore the new field system™ and  
learn more about the new updates.

**about teenage engineering**

teenage engineering is developing the  
alternative future of consumer electronics  
— each invention driven by need and made to  
last.

since 2007, teenage engineering has  
dispatched a series of products that earned  
their spot as studio essentials for the  
acclaimed artists, producers, and  
instrumentalists we all know and admire.

from OP-1 field to pocket operators®,  
OP-XY to OD-11, they have applied their  
signature mindset to building a new legacy  
of technology that continues to shape the  
industry as we know it.

their hq is located in stockholm, sweden,  
where a multidisciplinary team of software,  
electrical, and mechanical engineers and  
industrial designers are developing their  
products from start to finish. the studio is a  
fully equipped workshop with state-of-the-  
art rapid prototyping machines.
