introducing computer–2 the computer case you can't buy.

teenage engineering set a goal to design the cheapest computer case in the world. their engineers worked day and night to really push the limits and they went beyond all expectations. they engineered it all the way down to a cost of 0.

continuing their campaign, “25 the flipped out year”. teenage engineering introduces computer–2. a small form factor, mini-ITX computer case.

constructed from a single sheet of semi-transparent PP-plastic, the chassis features integrated living hinges and snap hooks that make assembly refreshingly tool-free. just fold, snap, and you're nearly there. installing the motherboard is equally effortless — simply push-click it into place with no screws, brackets, or stress required.

designed around the mini-ITX standard, the chassis comfortably houses a compact build without sacrificing performance. it fits a mini-ITX motherboard, an SFX power supply, and a dual-slot graphics card up to 180mm in length — all neatly packed into a small form factor that's easy to carry, simple to service, and satisfyingly minimalist.

whether you're building your first system or just tired of over-complicated cases, this chassis keeps things clean, clever, and almost completely screw-free.

*computer–2 is a pc case only, computer components are purchased separately

about teenage engineering

teenage engineering is developing the alternative future of consumer electronics — each invention driven by need and made to last.

since 2007, teenage engineering has dispatched a series of products that earned their spot as studio essentials for the acclaimed artists, producers, and instrumentalists we all know and admire.

from OP–1 field to pocket operators®, OP–XY to OD–11, they have applied their signature mindset to building a new legacy of technology that continues to shape the industry as we know it.

their hq is located in stockholm, sweden, where a multidisciplinary team of software, electrical, and mechanical engineers and industrial designers are developing their products from start to finish. the studio is a fully equipped workshop with state-of-the-art rapid prototyping machines.
